

# Architecting Assignments for an AI World

Facilitated by

Cassie Collier, Assistant Professor, Computer  
Management & Information Systems

Mitchell Haas, Online Learning Librarian &  
Assistant Professor

# Agenda

AI detection,  
documentation,  
and discussion

Adjusting  
assignments to  
reduce AI  
vulnerability

Incorporating AI  
into assignments

Exercise: Adjust  
assignments for  
an AI world

Retrospective &  
next steps

# AI Detection: Consistency and Documentation

---

## Difficulty of Detection

- AI detection is difficult to do with any reliability. [According to one experiment](#), Humans were only able to detect AI-generated text 53% of the time. Whereas, in the same setting random guessing was able to correctly identify AI 50 percent of the time.

## The Problem with Detectors:

- AI Detection Tools are useful as a data point when compiling evidence of AI misuse, but they cannot be solely relied upon. Remember your experience with plagiarism checkers (also examples of an AI tools), these tools can be very inconsistent as well.

## Consistency and Documentation are Key:

- Don't just outsource your confidence to an AI detector. Learn to recognize common AI use red flags and find a method of documentation that you can apply consistently and transparently.

# Common AI Use Red Flags

---

Look for Patterns not Perfection:

- Generic openings.
- Predictable paragraph structure.
- Perfect generic (fluffy) language.
- Fabricated/hallucinated sources.
- Regular use of buzzwords or improper use of jargon.
- Absence of detail and specific evidence (surface-level only).
- Overconfidence accompanied by factual mistakes or little detail.
- Lack of voice, perspective, or opinions.
- Writing not anchored to class (e.g., no mention of classroom readings, discussions, etc...).
- Inconsistent application of knowledge.
- Closing and openings nearly identical with no growth or development.

# AI Detection Documentation Best Practices

---

If AI Misuse is Suspected Gather Evidence:

- Save the original file with timestamps.
- Compare assignment to a baseline sample for student writing (e.g., an in-class writing).
- Document all potential AI use red flags and only use AI-detectors as a data point.
- Compare student writing to course context (e.g., does this submitted writing accurately reflect class discussion, readings, their participation, and any communication you have had with the student).
- Remember, never rely solely on AI detectors, guess at the student's intent, discuss details with colleagues (remember student privacy), or delay documentation of suspected AI use.

Finding Teachable Moments:

- Once you decide if you think AI misuse likely, next ask yourself:
  - What teachable moments can be highlighted from this student's AI use?
    - Great opportunity to redefine expectations and have a 1-on-1 with you student.
  - Is this student's use of AI a pattern and in violation of clear, consistent guidelines you established previously?
    - Does this situation require escalation?

# Transparency Over Trap-Setting

---

## Set Expectations Early:

- Move the conversation from reactive to proactive. Faculty should include an AI statement in their syllabi with concrete, discipline-specific examples of appropriate versus inappropriate use. Make sure students know what your expectations with AI are for your class.

## Consider a Framework:

- If you are unsure how to incorporate AI or how to quantify AI use in your courses, consider adopting a framework that details AI use expectations based upon a scale/levels. We mention an example later in this presentation but another resource not mentioned is ISU's [GenAI Usage Expectation Levels](#).

## Fostering Transparency and Dialogue:

- Fostering open dialogue with students around AI use builds trust and reduces the temptation to cheat. As much as possible, we should be having honest discussions with students around expectations around AI use and the consequences of misuse.

# From Policing to Purpose

---

## The Myth of "AI-Proofing"

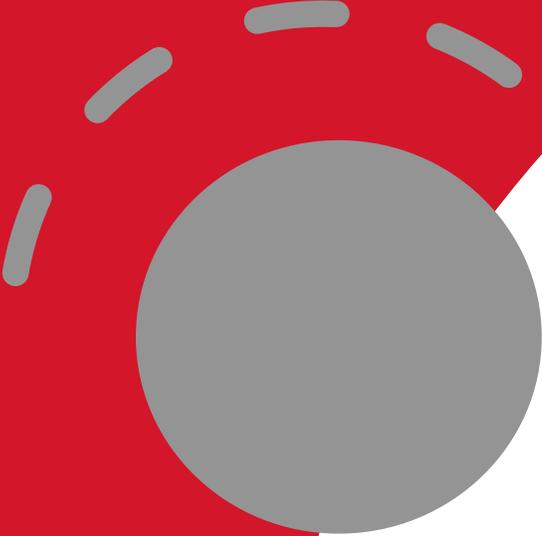

- AI is great at imitating the content and ideas. Trying to create a perfectly AI-proof assignment is a losing battle. Especially as we cannot control the actions of students regardless of if AI use makes sense for an assignment or not.

## Nobody Wants to Grade a Robot

- Policing AI use and grading AI-generated fluff is demoralizing. Instead, we need to communicate why the struggle of learning is necessary. (e.g. effective communication of the WHY behind our assignments, assessments, and course content)

## Faculty Judgement is Crucial

- Now more than ever, faculty judgement in navigating assignment creation and grading is crucial. You know your students better than an AI tool. Apply expectations around AI in your class in a clear, consistent way and be sure to document all evidence of suspected AI use when being transparent with students about their potential use.

To articulate guidelines  
for AI use, we must first  
**define** AI use

# Use of “artificial intelligence” lies on a spectrum

**No AI Use**

Paper & pencil assessments, in class, with devices prohibited

Using GenAI to critique finished drafts, write up outlines, bounce ideas...

**Full AI Use**

Prompting GenAI and pasting output directly into the assessment without edits

# Use of “artificial intelligence” lies on a spectrum... and changes as the tools change

**No AI Use**

**Full AI Use**

Running a Google  
search in 2021

Running a Google  
search in 2026

# Use of “artificial intelligence” lies on a spectrum... and changes as the tools change

No A

Use

The image shows a Google search interface for the query "nudge by thaler". At the top, the Google logo is on the left, and the search bar contains the text "nudge by thaler". Below the search bar are navigation tabs for "AI Mode", "All", "Shopping", "Images", "Videos", "Short videos", "Forums", "More", and "Tools".

The main content area features an "AI Overview" section, which is highlighted with a red rounded rectangle. This section contains the following text: "Thaler's 'nudge' theory, developed by Nobel laureate Richard Thaler and Cass Sunstein, refers to subtle, low-cost interventions in 'choice architecture' that guide people toward better decisions (e.g., healthier eating, increased retirement savings) without restricting their freedom of choice or altering economic incentives." Below this text, it says "This video provides a brief introduction to the concept of nudging:". To the right of the AI Overview, there are search results. The first result is for the book "Nudge: Improving Decisions About Health, Wealth, and Happiness" by Richard H. Thaler and Cass R. Sunstein, published by Barnes & Noble. The second result is a video titled "How much can you 'nudge' for good?" featuring Richard Thaler.

Abstract

- Presents a brief overview of AI and its prevalence across various industries.
- Highlights the increasing need for AI literacy in the face of AI's growing influence.
- Describes the paper's exploratory review of existing literature to conceptualize AI literacy.
- Proposes four aspects of AI literacy: knowledge, application, evaluation and creation, and ethical considerations.

1. Introduction

- Defines AI and mentions its evolution, citing McCarthy (2007) and Wang (2019).
- Discusses the impact of AI on various aspects of life, including job opportunities and potential displacement.
- Notes the emergence of AI literacy as a necessary skill set in the 21st century, emphasizing the need for K-12 education in AI.
- Highlights the importance of AI ethics and responsible AI development and usage.

2. Method

- Describes the search process for relevant literature, including databases and keywords used.
- Details the inclusion and exclusion criteria for selecting articles, providing an example of an excluded study (Sharma, 2019).
- Explains the data coding and analysis process, mentioning the constant comparative method and inter-

ABSTRACT

Artificial Intelligence (AI) has spread across industries (e.g., business, science, art, education) to enhance user experience, improve work efficiency, and create many future job opportunities. However, public understanding of AI technologies and how to define AI literacy is under-explored. This vision poses upcoming challenges for our next generation to learn about AI. On this note, an exploratory review was conducted to conceptualize the newly emerging concept “AI literacy”. In search for a sound theoretical foundation to define, teach and evaluate AI

# The Artificial Intelligence Assessment Scale

Perkins et al. 2024

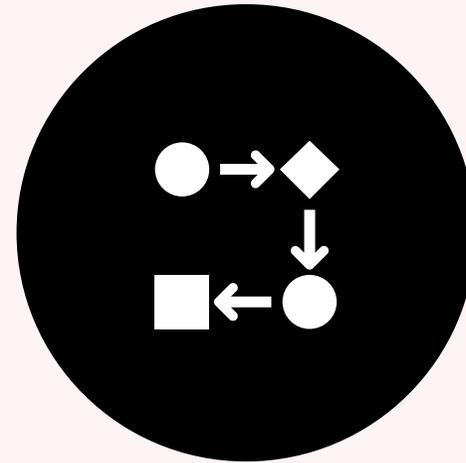

1	NO AI	<p>The assessment is completed entirely without AI assistance. This level ensures that students rely solely on their knowledge, understanding, and skills.</p> <p><b>AI must not be used at any point during the assessment.</b></p>
2	AI-ASSISTED IDEA GENERATION AND STRUCTURING	<p>AI can be used in the assessment for brainstorming, creating structures, and generating ideas for improving work.</p> <p><b>No AI content is allowed in the final submission.</b></p>
3	AI-ASSISTED EDITING	<p>AI can be used to make improvements to the clarity or quality of student created work to improve the final output, but no new content can be created using AI.</p> <p><b>AI can be used, but your original work with no AI content must be provided in an appendix.</b></p>
4	AI TASK COMPLETION, HUMAN EVALUATION	<p>AI is used to complete certain elements of the task, with students providing discussion or commentary on the AI-generated content. This level requires critical engagement with AI generated content and evaluating its output.</p> <p><b>You will use AI to complete specified tasks in your assessment. Any AI created content must be cited.</b></p>
5	FULL AI	<p>AI should be used as a 'co-pilot' in order to meet the requirements of the assessment, allowing for a collaborative approach with AI and enhancing creativity.</p> <p><b>You may use AI throughout your assessment to support your own work and do not have to specify which content is AI generated.</b></p>

Table 1 The AI Assessment Scale

# Consider the *Artifact* vs. the *Process*

ARTIFACT: THE END  
RESULT

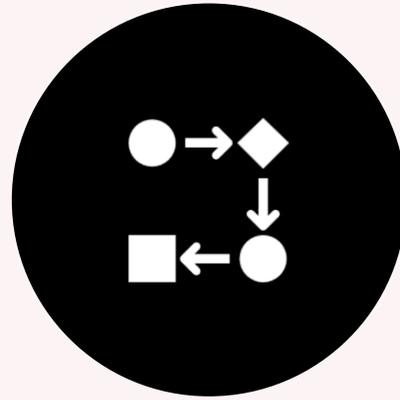

PROCESS: THE WAY WE  
GOT TO THE RESULT

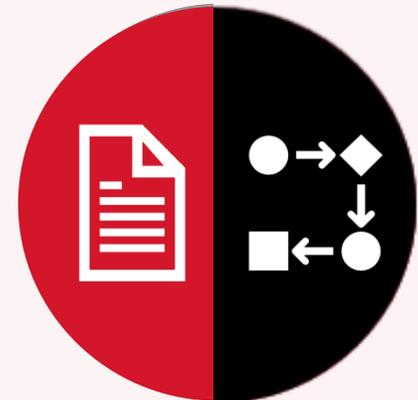

# Some Examples from my Classroom

RESUME CREATION

READING  
REFLECTION

DATA VISUALIZATION  
DASHBOARD

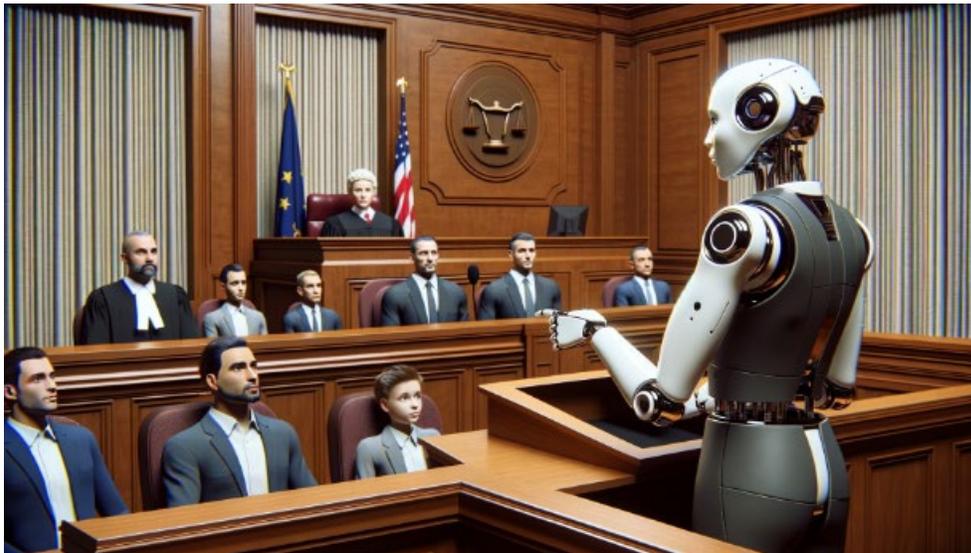

# Architecting for Engagement & Curiosity

- Shift toward live presentations, discussions, debates, and Q&A; focus on specific material students only get in class
- Provide students with flawed outputs they must fix
- Require use of AI – and require citations and [transcripts](#)
- Shift focus from the *artifact* to the *process* (Process Portfolio)
- Test assignments in a variety of AI tools before assigning them
- When absolutely necessary... revert to pencil & paper

# Presentations, Debates, and Q&A

## The Old Way

Write a 10-page research paper on the impact of social media on teenage mental health. Due in 4 weeks.

## The New Way

- Utilize AI to prepare a presentation on the impact of social media on teenage mental health.
- Assign AI various roles to help you prepare:
  - Supporting presentation partner
  - Challenging debate opponent
  - Public speaking coach
- Deliver the presentation to the class
- Class, utilize AI to produce 50 questions to ask based on the presentation. Evaluate these and select the best 5 to turn in; ask the best 2.
- Exam question: In Peer A's presentation, she talked about X – summarize the class discussion and reflect on concept X to...

# Intentionally Flawed Content

## The Old Way

Write a 10-page research paper on the impact of social media on teenage mental health. Due in 4 weeks.

## The New Way

- Review the attached essay (*develop an essay that is intentionally flawed, with poor logic or lacking elements of a model taught in class, etc. – AI can help!*)
- Identify X flaws or mistakes in the essay (specifically, flaws discussed in class not widely known on the Internet...)
- Suggest a plan of action for how you would improve the essay
- Utilize AI to support your plan of action, or utilize it to suggest a dozen plans of action from which you choose the best

Perhaps embed some hallucinated footnotes for students to catch?

AI · DELOITTE

# Deloitte was caught using AI in \$290,000 report to help the Australian government crack down on welfare after a researcher flagged hallucinations

BY NINO PAOLI  
NEWS FELLOW

October 7, 2025 at 5:10 PM EDT

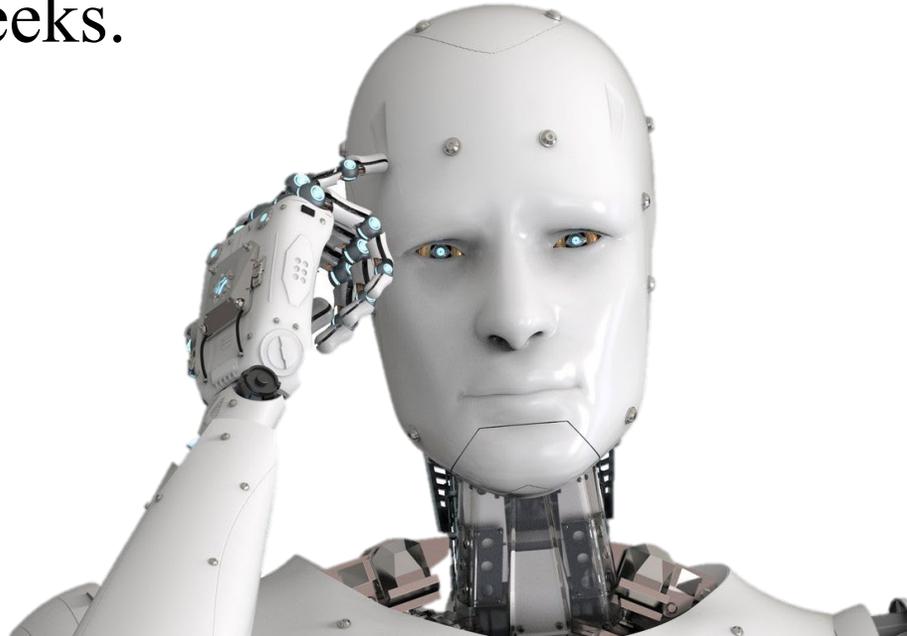

Deloitte said it would invest \$3 billion in generative AI development through fiscal year 2030.

GETTY IMAGES

# Requiring use of AI

## The Old Way

Write a 10-page research paper on the impact of social media on teenage mental health. Due in 4 weeks.

## The New Way

- Develop 5 AI prompts to help you understand the impact of social media on teenage mental health
- Review & fact-check outputs from the prompts. Identify one area where AI excelled in finding information and one where it was lacking.

# The Process Portfolio

## The Old Way

Write a 10-page research paper on the impact of social media on teenage mental health. Due in 4 weeks.

## The New Way

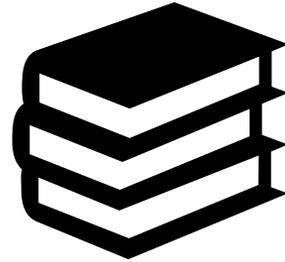

- Week 1: Proposal & AI Brainstorm
- Week 2: Annotated Bibliography
- Week 3: The Messy First Draft
- Week 4: The Final Polish & Metacognitive Reflection

Shift the focus away from the *artifact* toward the *process*. Require use of AI and include AI transcripts as deliverables to audit students' AI interactions.

*What tasks MUST your students be able to do without the use of AI in the workforce? We call these...*

# The “Landing a Plane” Use Cases

# For the *Landing a Plane* Use Cases...

Flip the classroom: require learning/AI use outside the classroom and remove technology in the classroom

Test students on knowledge using oral exams or paper and pencil exams in the classroom with no technology

Use sparingly – there are probably very few “landing a plane” use cases in your field!

Demand  
**more**  
from your  
students

# How to demand more?

## Quantity

- If you used to ask for 1 deliverable, does it make sense to ask for 20?

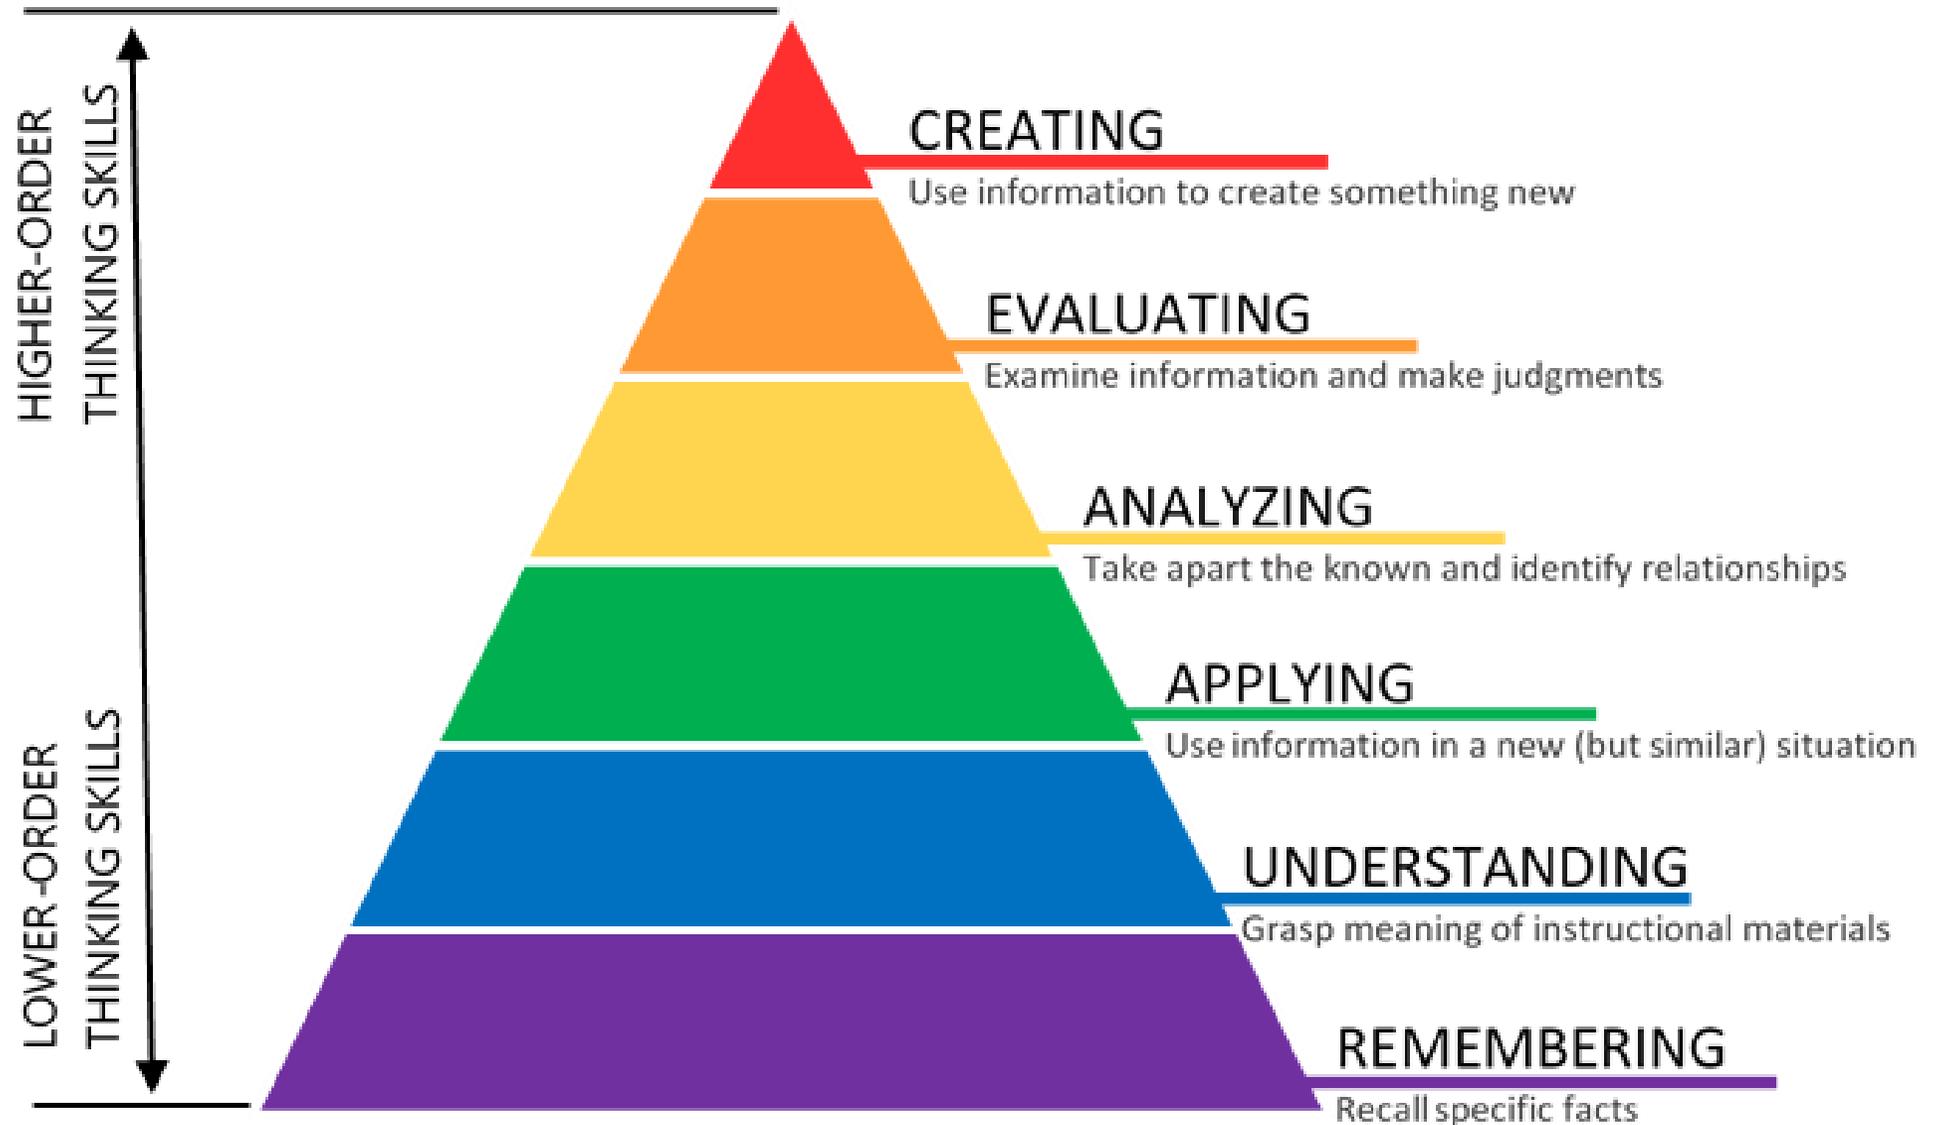

## Quality

- If you used to ask for Level 1 detail, can you ask for Level 20 detail?

## Next steps

- What's the logical next step after completing a given task?
- Don't stop at design – ask students to build
- Consider Bloom's Taxonomy

# BLOOM'S TAXONOMY – COGNITIVE DOMAIN (2001)

# Bloom's Taxonomy Revisited

Use this table as a reference for evaluating and making changes to aligned course activities and assessments (or, where possible, learning outcomes) that account for generative Artificial Intelligence (AI) tool capabilities and distinctive human skills.

All course activities and assessments will benefit from **review** given the capabilities of AI tools; those at the **Remember** and **Analyze** levels may be more likely to need **amendment**.

HIGHER-ORDER THINKING SKILLS

LOWER-ORDER THINKING SKILLS

	DESCRIPTION	AI CAPABILITIES	DISTINCTIVE HUMAN SKILLS
<b>CREATE</b>	Use information to create something new	Suggest a range of alternatives, enumerate potential drawbacks and advantages, describe successful real-world cases	Formulate original solutions incorporating human judgement, collaborate spontaneously
<b>EVALUATE</b>	Examine information and make judgments	Identify pros and cons of various courses of action, develop rubrics	Engage in metacognitive reflection, holistically appraise ethical consequences of alternative courses of action
<b>ANALYZE</b>	Take apart the known and identify relationships	Compare and contrast data, infer trends and themes, compute, predict	Critically think and reason within the cognitive and affective domains, interpret and relate to authentic problems, decisions, & choices
<b>APPLY</b>	Use information in a new (but similar) situation	Make use of a process, model, or method to illustrate how to solve a quantitative inquiry	Operate, implement, conduct, execute, experiment, and test in the real world; apply creativity and imagination to idea & solution development
<b>UNDERSTAND</b>	Grasp meaning of instructional materials	Describe a concept in different words, recognize a related example, translate	Contextualize answers within emotional, moral, or ethical considerations
<b>REMEMBER</b>	Recall specific facts	Recall factual information, list possible answers, define a term, construct a basic chronology	Recall information in situations where technology is not readily accessible

# Increase the demand to increase the learning

## Pre-AI

- Task: Develop 12 queries to run against your database
- Timeframe: 4 weeks

```
1
2 |--To Get the Name of the Company where Employee Hentry Forlonge works
3 SELECT Cmp.Name
4 FROM Employee Emp, WorksIN, Company Cmp
5 WHERE MATCH(Emp-(WorksIN)->Cmp)
6 AND Emp.name='Henry Forlonge';
```

Name
A Datum

## Post-AI

- Utilize AI to write 50 queries in class today (2 min)
- Test each query for effectiveness (1 hour)
- Reflect on what AI does well and what it does poorly in query construction (1 hour)
- Select the 12 best queries and include in your database project (1 hour)

# Increase the demand to increase the learning

## Pre-AI

- Read the attached case study and write narrative answers to the questions at the end

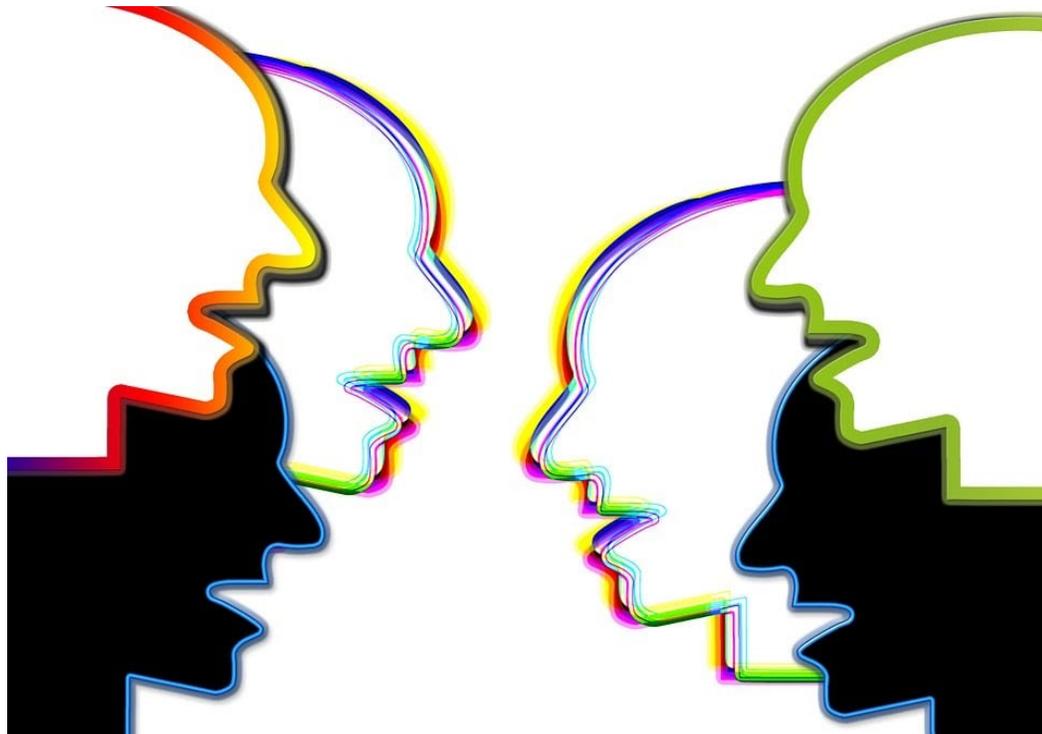

## Post-AI

- Utilize multi-shot prompting with AI to write a case that demonstrates XYZ concept from class
- Critique and improve the case that AI developed
- Contrast the AI-generated case with the human-generated case provided. What does each do well, and where does each fall short?

# Increase the demand to increase the learning

## Pre-AI

- Write a reflection of Chapters 1-3 in the book we are reading in class

## Post-AI

- Develop a prompt to assign AI the role of Character A from the book, and you will act as Character B. Test the prompt and be sure AI acts as you would expect Character A to act (provide the transcript)
- As Character B, engage in a debate with Character A via AI regarding the topic of X. Ask and answer several questions.
- Reflect – who won the debate and why? How could you have improved your performance?

# Increase the demand to increase the learning

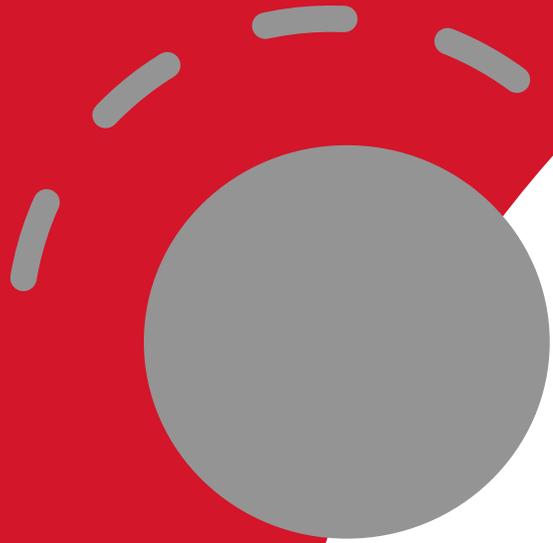

## Pre-AI

- Develop a suggested entrepreneurial business plan

## Post-AI

- Prompt AI to develop 20 business plans for a given startup
- Utilize AI to evaluate the similarities and differences in the 20 business plans
- Develop a framework (using AI as needed) to evaluate each plan
- Select the top 5 plans and justify why each is the best
- Generate 10 next steps for implementing the #1 business plan

Students are ultimately  
accountable for their  
deliverables

*If AI generates errors – students  
must catch them.*

# Hands-On Activity

Select an assignment or assessment from one of your classes

Re-architect the assignment to better suit a post-AI world utilizing the worksheet available in Microsoft Teams

# In Summary

---

Avoid policing student use of AI

---

Clearly articulate guidelines for use of AI in your classes

---

Architect assessments for curiosity and engagement by embracing AI

---

Demand more from your students

---

Students remain accountable for their deliverables

---

# Questions & Discussion

Thoughts on these topics? What has worked  
for you in the post-AI classroom?

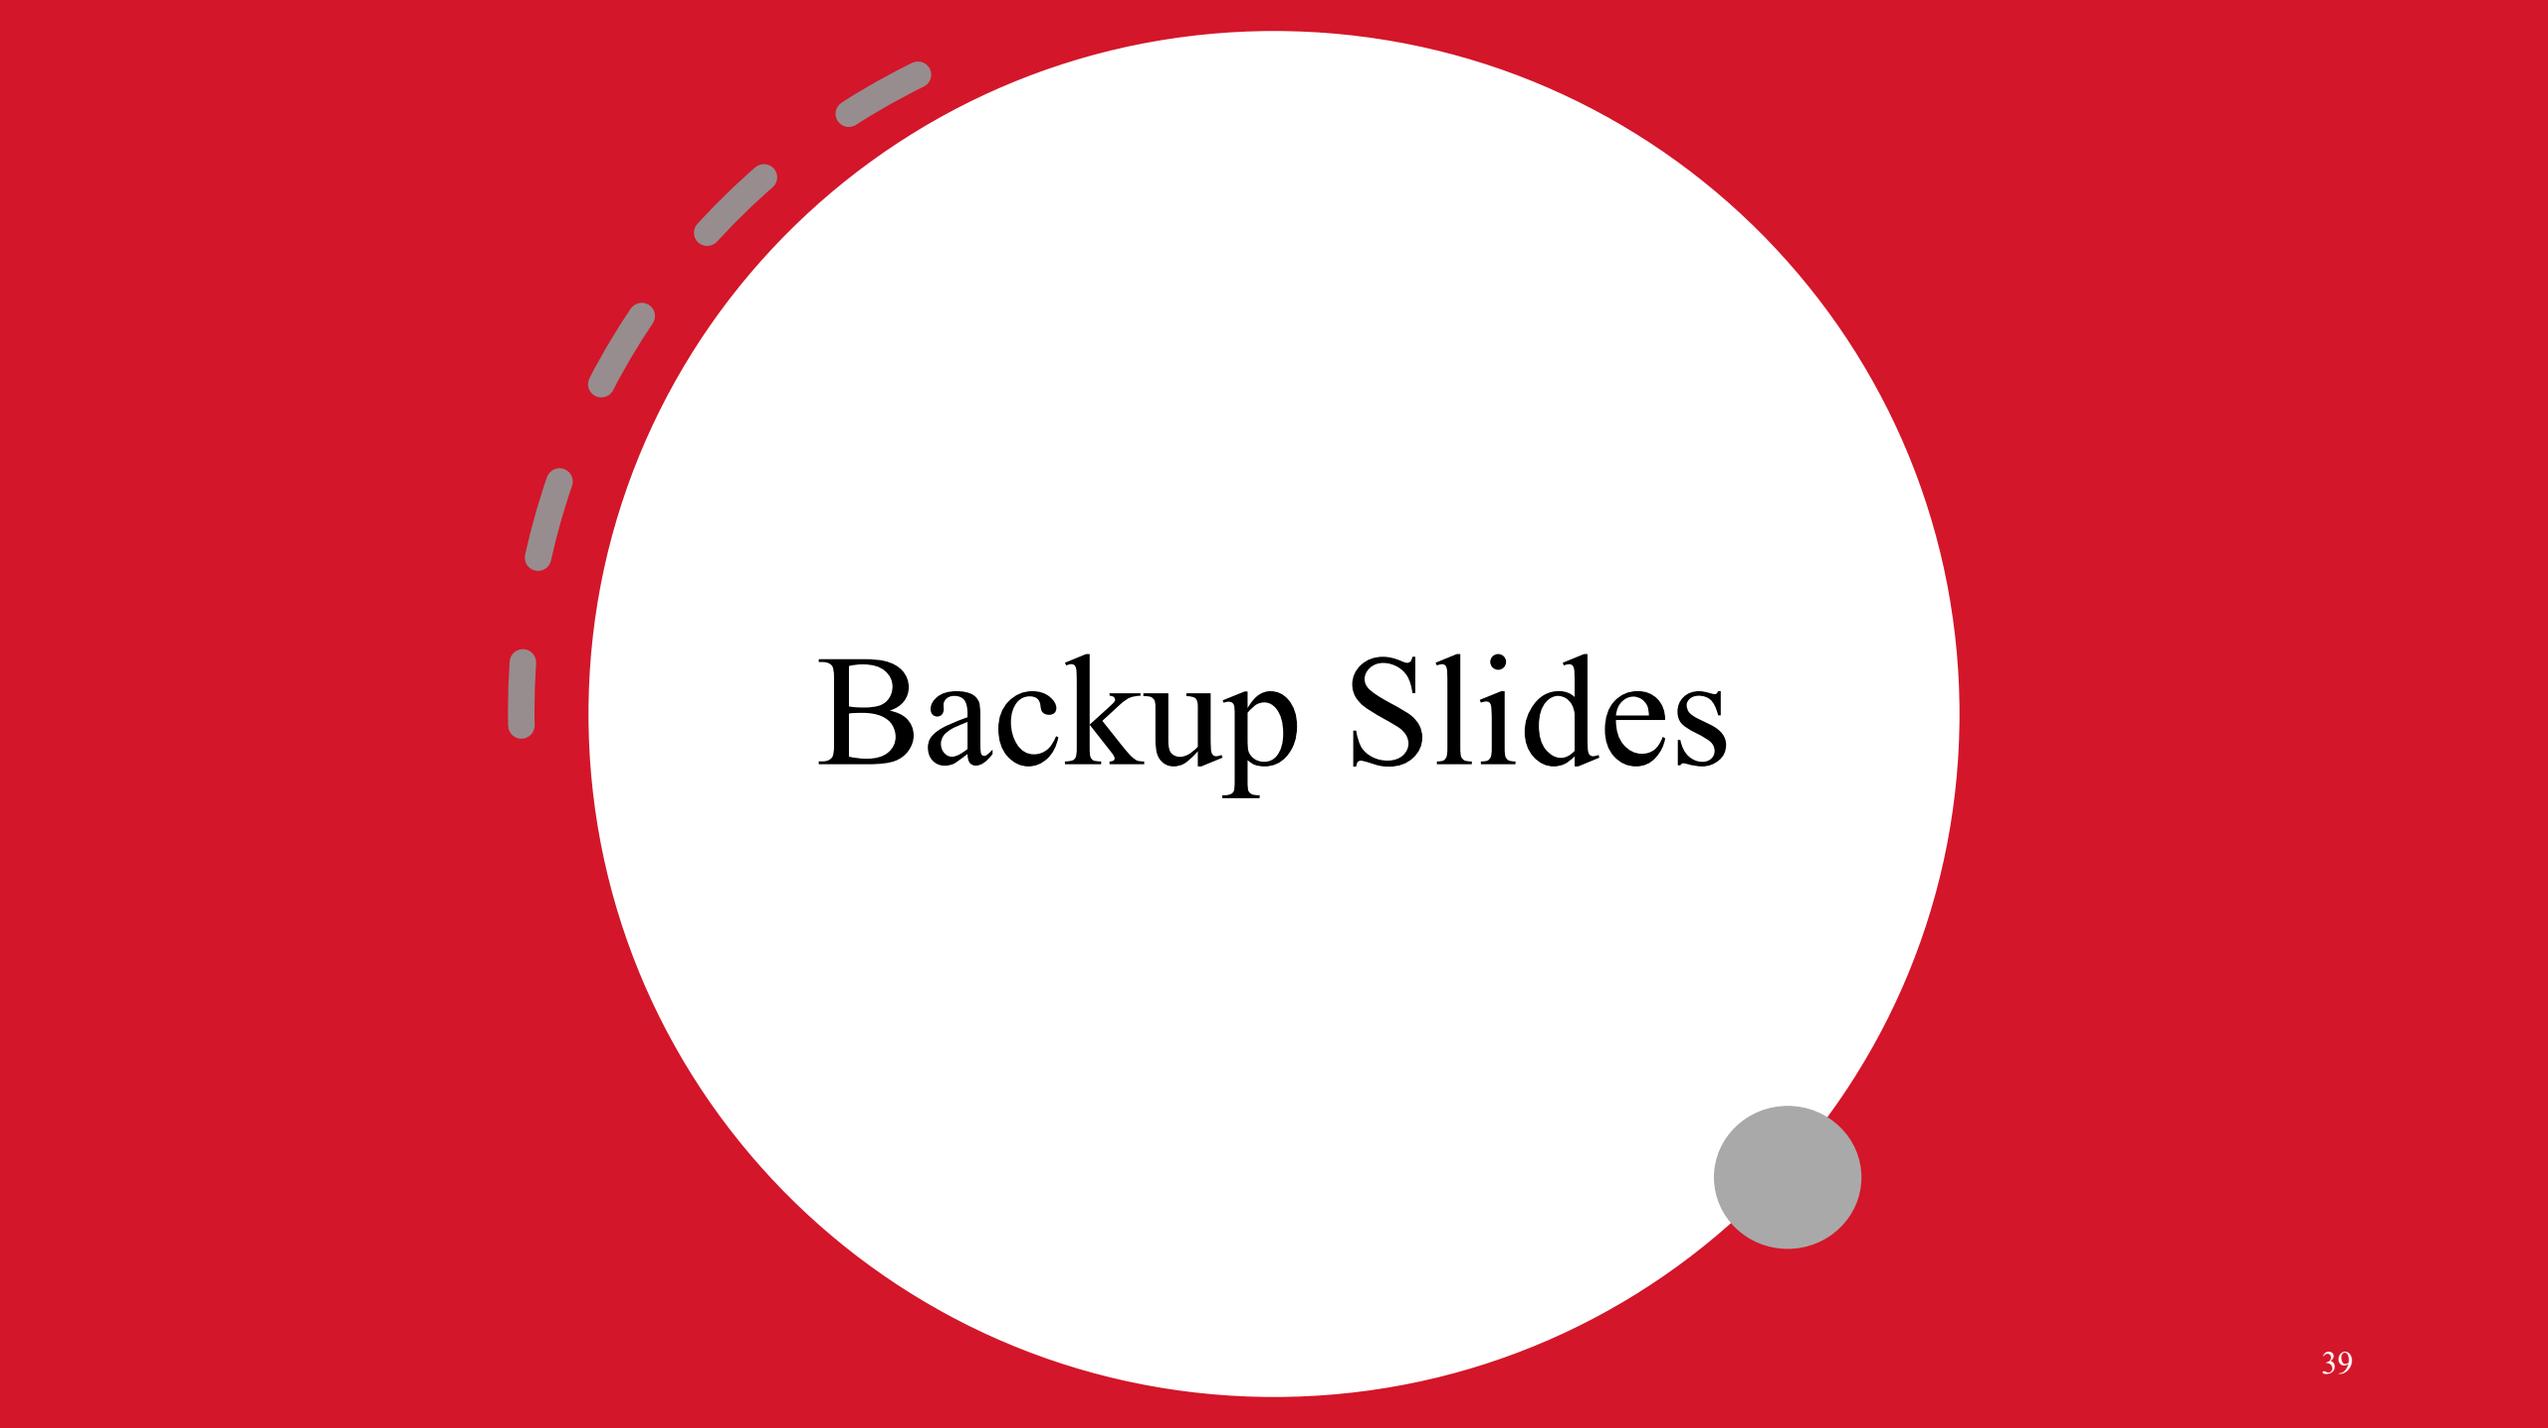

# What's next?

- Provide your feedback on this session
- Future seminars:

# The Detection Illusion

---

Humans cannot  
reliably detect AI use

---

... but we think we  
can (Fleckenstein et al. 2024)

# AI Detection Tools

- Are generally not independently verified
- Are provided by companies with motives
- Questionable legality
- Are easily fooled with “adversarial prompting”
- Are biased against:
  - International writers (Liang et al. 2023)
  - Neurodivergent writers (Gibson, 2024)
- Are just not as reliable as we want them to be!

# New AI classifier for indicating AI-written text

*As of July 20, 2023, the AI classifier is no longer available due to its low rate of accuracy. We are working to incorporate feedback and are currently researching more effective provenance techniques for text, and have made a commitment to develop and deploy mechanisms that enable users to understand if audio or visual content is AI-generated.*

Students don't realize that getting help with homework is undermining their learning.

Guiding students on good use of AI helps avoid this learning loss.

# Illusory Knowledge
